T = 0.40
chr8 · acrocentric
T = 0.81
chr9 · acrocentric
T = 0.61
chr11 · acrocentric
T = 0.77
chr12 · acrocentric
T = 0.59
chr13 · acrocentric
T = 0.57
CDS nucleotide diversity π̂ (%)
position on female haplotype 1 (Mb)
grey dots: genes, π̂ = mean of the three diploid pairwise CDS p-distances
line: 2-Mb window median (≥10 genes)
dark shading: RepeatOBserver intervals ≥100 kb (Hirabayashi 2025 Table S8, H1); light: their span (polycentric) or minor candidates (acrocentric); dashed: operational centromere point
T = median π̂ of the 20 % of genes nearest the point / median of the rest
